CapacityWeb
www.capacityweb.com

CapacityWeb is a sourcing and productivity solution for original equipment manufacturers (OEMs) and contract manufacturers for built-to-order engineered parts. OEMs use the CapacityWeb business platform to source directly from their existing manufacturers more efficiently, and to identify and qualify new suppliers for their unique product and supply-chain needs. Differentiated by its Elitas™ qualification process, PrismLogic™ proprietary intelligent matching engine, and best-of-breed collaboration platform, CapacityWeb enables manufacturers worldwide to buy and sell engineered parts, capabilities and manufacturing capacity. The company, which derives its revenues from transaction and membership fees as well as fees associated with supplemental service offerings, was formed in 1999 by two Indian-born entrepreneurs.
